

AMENDMENT UNDER 37 C.F.R. § 1.116  
U.S. Appln. 09/719,424

polymer (C) containing at least one functional group selected from the group consisting of carboxyl, epoxy, amino and amido, and 0.2-5 wt.% of at least one alkali metal salt (D) selected from the group consisting of potassium thiocyanate and an alkali metal salt of dodecylbenzenesulfonic acid, based on 100 wt.% of a total amount of four components (A)-(D).

**Please add the following new claims:**

9. (New) A formed resin article according to claim 8, wherein the rubber-reinforced aromatic vinyl resin (A) is a graft copolymer obtainable by polymerizing monomer components (a-2) in the presence of a rubber polymer (a-1), or a mixture of said graft copolymer and a copolymer of the monomer components (a-2), the monomer components (a-2) comprising (i) an aromatic vinyl monomer (ii), at least one monomer selected from the group consisting of a vinyl cyanide monomer and an alkylester monomer of unsaturated carboxylic acid and, optionally, (iii) another copolymerizable vinyl monomer.

10. (New) A formed resin article according to claim 8, wherein the polyamide elastomer (B) is obtained by reacting polyol with at least one compound selected from the group consisting of aminocarboxylic acid having not less than 6 atoms, lactam having not less than 6 carbon atoms and nylon mn salt  $m + n \geq 12$ .

11. (New) A formed resin article according to claim 8, wherein the modified vinyl polymer (C) is a copolymer of an ethylenically unsaturated monomer containing at least one functional group selected from the group consisting of carboxyl, epoxy, amino and amido with another ethylenically unsaturated monomer.
